

IN THE CLAIMS

1-9. (Cancelled)

10. (Original) ~~The cable for data transmission as claimed in Claim 8, characterized in that~~ A cable for data transmission, characterized by including:

- a core wire having a medium that transmits data;
- a coating member which covers at least part of said core wire, said coating member having a flat surface portion formed substantially flat at part of a surface thereof and having stickiness and being divided into a plurality of layers and provided to have said core wire sandwiched between the divided layers respectively;
- a separating member stuck on said flat surface portion and being releasable from said coating member;
- a cover member which covers the surface of said coating member at an area other than said flat surface portion; and
- an intervening member disposed between said core wire and said coating member, said intervening member ~~has~~ having a substantially C-shaped cross section and is formed tubular.

11-12. (Canceled).

13. (Currently Amended) ~~The cable for data transmission as claimed in Claim 11, characterized in that:~~ A cable for data transmission, characterized by including:

- a plurality of core wires each having a medium that transmits data, disposed at predetermined intervals, respectively;
- a coating member which covers at least part of each of said plurality of core wires, said coating member having a flat surface portion formed substantially flat at part of a surface thereof and having stickiness;
- a separating member stuck on said flat surface portion and being releasable from said coating member;
- a cover member which covers the surface of said coating member at an area other than said flat surface portion; and

an intervening member disposed between said core wire and said coating member,
wherein,

said coating member is divided into a plurality of layers and provided to have said core
wire having said intervening member sandwiched between the divided layers respectively,

said intervening member is made of sheet-like members, and

said plurality of core wires are sandwiched from top and bottom with an upper one of
said sheet-like members and a lower one thereof and further sandwiched by said divided coating
member.
